SUMMARY

Results-driven AI Engineer and Full-Stack Developer with a passion for building intelligent, production-ready systems that solve real-world problems. Specializes in Agentic RAG architectures, multi-agent orchestration, and end-to-end LLM integration, bringing together the full stack from data pipelines to scalable web deployments. Equally, at home across the full Machine Learning lifecycle, from exploratory data analysis and feature engineering through to model training, evaluation, and production deployment

EXPERIENCE

AI Engineer Trainee
Ogun State GenAI Fellowship (Publica Academy) 08/2025 - 02/2026

- Architected multi-agent systems with LangGraph for autonomous task decomposition and collaboration in enterprises.
- Machine Learning: Engineered and evaluated models from mathematical principles to building and deployment.
- Production RAG Pipelines: Created RAG systems using semantic chunking and vector embeddings. Reduced hallucination rates in document intelligence.
- Type-Safe Backends: Developed robust, high-concurrency APIs using FastAPI and Pydantic, ensuring production-grade data validation and seamless LLM integration.

Cyber Risk Analyst Intern
Chevron 08/2024 - 02/2025

- Risk Mitigation: Analyzed phishing reports identifying vulnerabilities. Delivered insights to strengthen security.
- Disaster Recovery & BCP: Validated effectiveness of protocols and plans via enterprise recovery exercises.
- Compliance & Privacy: Engaged in Data Privacy Audit walkthroughs, ensuring strict compliance with global regulations and reinforcing cybersecurity best practices for sensitive corporate data.

Web Developer
School of Purpose 11/2024 - Present

- Developed high-performance web apps; built admin dashboard for data-driven management.
- Optimized frontend performance for low-latency interaction with complex, AI-driven backend logic.

Technical Instructor
Aptech Computer Education 09/2024 - 11/2024

- Mentored students in Object-Oriented Programming (OOP), Database Management, and Software Engineering fundamentals

Front-End Developer
JEXCEL TECH 09/2023 - 09/2024

- Built modular React components for enterprise apps.
  Ensured cross-platform usability and code maintainability.

EDUCATION

B.Sc. in Data Science
IU International University of Applied Sciences, Germany

SKILLS

AI Engineering

Large Language Models (LLMs) Architectures • **Agentic RAG (Retrieval Augmented Generation)** • **Agentics (Multi-agent Systems)** • **Transformer Models** • **Tool-integration** • **Prompt Engineering**

Machine Learning & Data Science

Linear Algebra • **Inferential Statistics** • **Scikit-learn** • **Pandas** • **Exploratory Data Analysis** • **Feature Engineering** • **Model Evaluation**

Full-Stack Development

Python (FastAPI) • **Pydantic** • **OOP** • **JavaScript/TypeScript (React)** • **HTML5** • **CSS3** • **TailwindCSS** • **RESTful API Architecture**

Data & Infrastructure

Vector Databases (Pinecone, ChromaDB, FAISS) • **MySQL** • **PostgreSQL** • **Supabase** • **Docker** • **Git/GitHub** • **Agile Methodology**

PROJECTS

Sentinel Banking : AI-Driven Middleware Intelligence System (Fullstack AI Engineer)

- Built the RAG policy grounding layer anchoring every agent decision to verified banking policy documents ensuring fraud detection verdicts, complaint routing, and quality specialist recommendations are traceable to specific policy clauses, not LLM assumptions.
- Implemented an agent orchestration system with reasoning pipelines and tool-based workflows; integrated LLM-powered explanation layers into the deterministic decision engine to enable full auditability.
- Delivered full-stack: contributed to both the backend AI services and the React frontend dashboard used by operations and quality specialist teams.

EDUCATION

Advanced Diploma in Software Engineering (ADSE)

Aptech Computer Education

2022 - 2024

- Focus: Software Architecture, Full-Stack Development, Data Structures

Diploma in Graphic Design

Aptech Computer Education

2021 - 2022

PROJECTS

SabiLens : AI-Powered NAFDAC Food Product Counterfeit Detection System

- Designed and built the Regulatory RAG module : the ground truth layer that every verdict in the system depends on, serving real-time NAFDAC product verification to the fusion engine over HTTP.
- Engineered a full RAG ingestion pipeline with idempotent upserts safe for production re-runs.
- Implemented a ReAct verification agent with five dynamic tools that autonomously selects its own tool sequence based on what it finds.
- Built four retrieval strategies : exact metadata lookup (no embedding, in-memory cached), semantic fallback, category browse, and applicant search covering all OCR quality scenarios from clean scans to damaged labels.
- Designed a deterministic regulatory scoring layer (6 calibrated verdict paths) and exposed the full pipeline as a production FastAPI service. Reduced scan latency from ~5 minutes to under 300ms via eager singleton loading and metadata-only fetches.

Breast Cancer Prediction

- Designed an end-to-end ML pipeline using Scikit-learn and FastAPI to predict diagnostic outcomes with high precision

White Wine Quality & Loan Prediction

- Developed regression and classification models using extensive EDA and feature engineering to automate quality scoring and loan eligibility assessment
